Professional Summary

Software engineer and engineering student with a strong passion for developing full-stack applications and backend solutions. Always eager to explore new technologies, solve complex problems, and continually improve my skills.

Technical Skills

- **Languages:** JavaScript, Python, C
- **Frontend:** HTML, CSS, React, Tailwind CSS
- **Backend:** Node.js, Express, JWT, REST APIs
- **Databases:** MongoDB, PostgreSQL
- **Tools & Skills:** Git, GitHub, VS Code, Insomnia, Vercel, Data Structures, OOP

Education

Computer and Communication Engineering

Faculty of Engineering - Alexandria University [September 2024 - June 2028]

Projects

Nodejs Authentication Module ([GitHub repo](#))

A lightweight module which handles user authentication, token handling and database integration through NodeJS & MongoDB

- Tech stack: Nodejs, MongoDB, JWT, Bcrypt
- Built a lightweight Node.js authentication module with secure JWT tokens handling.
- Designed a flexible user schema system integrated with MongoDB for user storage and validation.
- Implemented password hashing, email validation, and reusable authentication utilities.

Noted. ([try live here](#))

A web app for efficient note-taking with user-authentication and team collaboration via note-sharing through invite links.

- Tech stack: React, Nodejs, Express, MongoDB.
- Seamless collaboration for teams through secure note-sharing using JWT tokens.
- Stay organized by keeping all relevant notes under one section.

vibe-match ([try live here](#))

AI-powered web app that recommends songs based on the user's mood input using natural language processing.

- Tech stack: React, Nodejs, Express.
- The app receives the user's mood and using Google Gemini's API generates an appropriate song which is then fetched using the Spotify API
